Eduniti for Physics

“JOIN”

Case 1 ($\mu = 0$)

Case 2 ($\mu \neq 0$)
(2A, 2B, 2C, 2D)

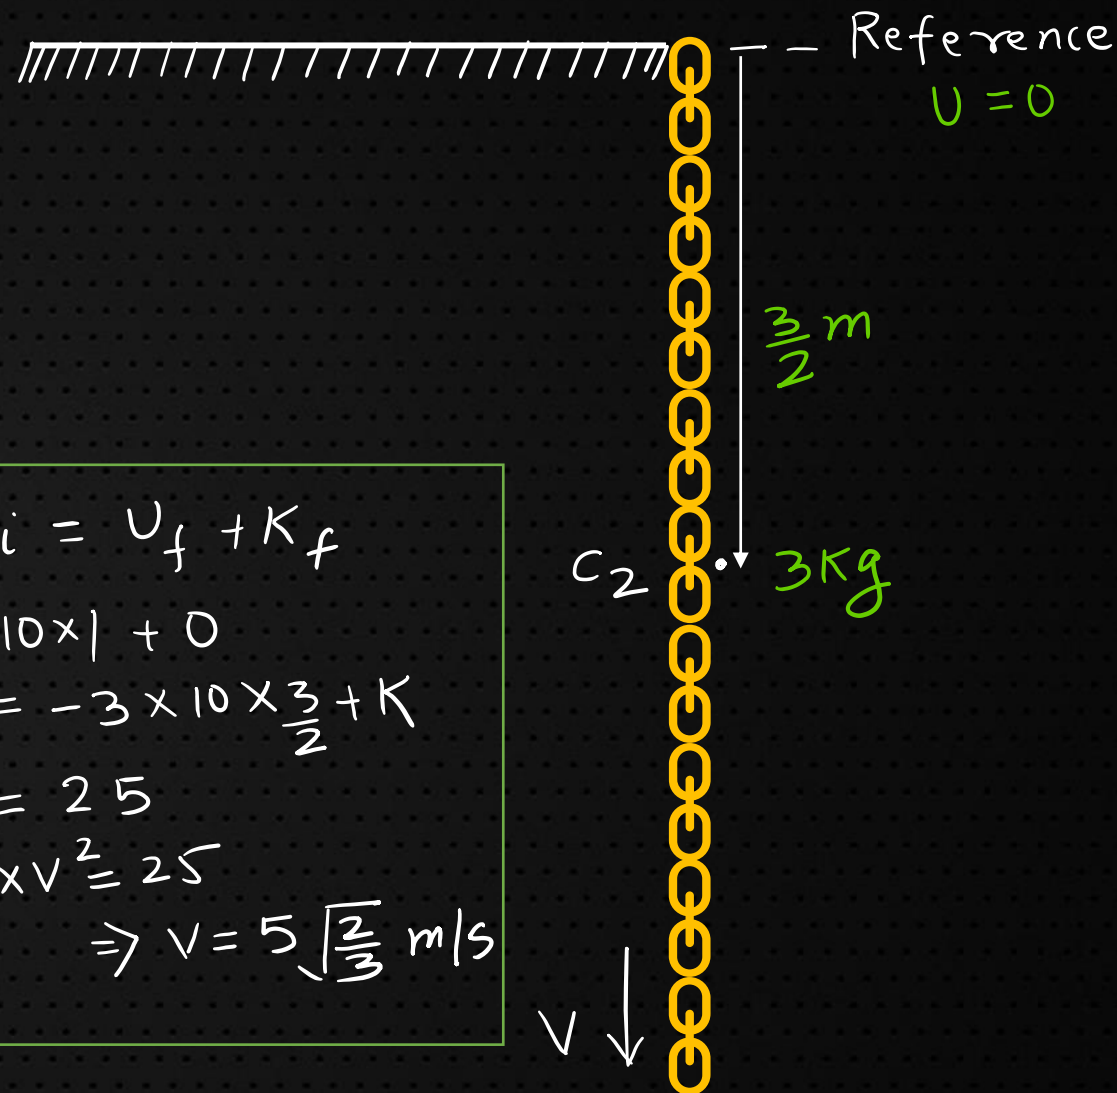

Case 1

($u=0$)

$$L = 3 \text{ m}$$

$$x = 1 \text{ m}$$

$$M = 3 \text{ Kg}$$

$$\begin{aligned} U_i + K_i &= U_f + K_f \\ \Rightarrow -2 \times 10 \times 1 + 0 &= -3 \times 10 \times \frac{3}{2} + K \\ \Rightarrow K &= 25 \\ \Rightarrow \frac{1}{2} \times 3 \times v^2 &= 25 \\ \Rightarrow v &= 5\sqrt{\frac{2}{3}} \text{ m/s} \end{aligned}$$

Case 2A

Chain Length = L

Find minimum value
of x in terms of L for
which chain don't slip.

Chain Mass = M

Case 2A

Chain Length = L

Find minimum value of x in terms of L for which chain don't slip.

Chain Mass = M

Diagram illustrating the forces on the chain segments:

- Horizontal segment (length x):
 - Weight: $\mu \frac{Mx}{L} g$
 - Normal force: $\frac{Mx}{L}$
- Vertical segment (length $L-x$):
 - Weight: $\frac{M}{L}(L-x)g$

Equilibrium condition:

$$\mu \frac{Mx}{L} g = \frac{M}{L}(L-x)g$$

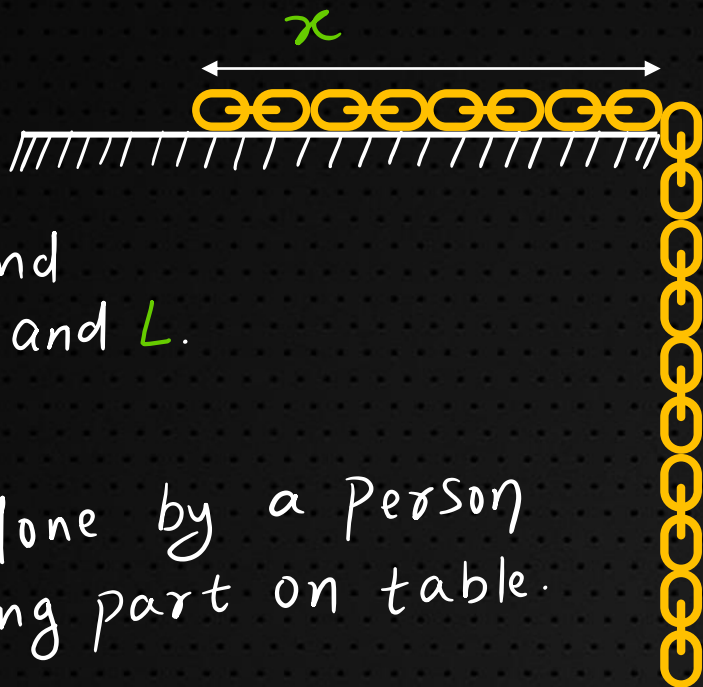

Solving for x :

$$\Rightarrow \mu x = L - x$$

$$\Rightarrow \boxed{x = \frac{L}{1 + \mu}}$$

Case 2B

Chain mass and
Length is m and L .

$$x = 2L/3$$

Find Work done by a Person
to put hanging part on table.

Case 2B

Chain mass and Length is m and L .

$$x = 2L/3$$

Find Work done by a person to put hanging part on table.

$$\therefore W_{\text{ext}} = \Delta U = U_f - U_i$$

$$\Rightarrow W_{\text{ext}} = 0 - \left(-\frac{m}{3} \times g \times \frac{L}{6} \right)$$

$$= \frac{mgL}{18}$$

Case 2C

Chain mass and
Length is m and L .

$$x = 2L/3$$

Find work done by friction
while chain slips off table.

Case 2C

Chain mass and Length is m and L .

$$x = 2L/3$$

Find Work done by friction while chain slips off table.

$$\mu dN = df$$

$$dm \cdot g = \frac{m}{L} dx g$$

$$dW_f = -\mu dN \cdot x$$

$$\Rightarrow W_f = - \int_0^{2L/3} \mu x \frac{m}{L} dx \cdot g \cdot x$$

$$\Rightarrow W_f = - \frac{\mu m g}{L} \left(\frac{x^2}{2} \right)_0^{2L/3}$$

$$= \boxed{-\frac{2}{9} \mu m g L}$$

Case 2D

Chain mass and
Length is m and L .

$$x = 2L/3$$

Find speed of chain when
it slips off table.

Case 2D

Chain mass and Length is m and L .

$$x = 2L/3$$

Find speed of chain when it slips off table.

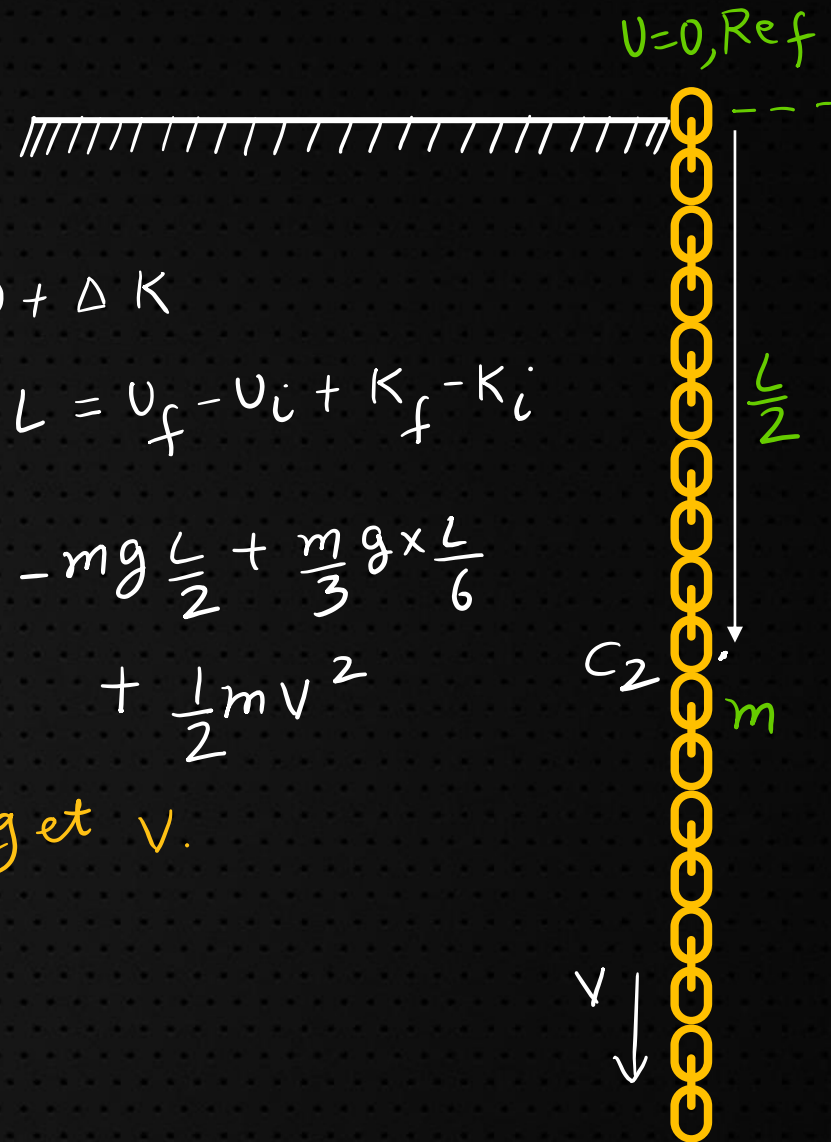

$$W_f = \Delta U + \Delta K$$

$$\Rightarrow -\frac{2}{9} \mu mgL = U_f - U_i + K_f - K_i$$

$$\Rightarrow -\frac{2}{9} \mu mgL = -mg \frac{L}{2} + \frac{m}{3} g \times \frac{L}{6} + \frac{1}{2} m v^2$$

Solve to get v .
